ALLERGAN FAT DISSOLVER

WHAT IS ALLERGAN FAT DISSOLVER?

Allergan Fat dissolver is an injectable drug that can reduce submental (under the chin) fat and redefine your jawline, effectively eliminating your double chin without surgery. Submental fullness is a common yet undertreated facial aesthetic condition that affects both men and women. This condition can be influenced by several factors including aging, genetics, and weight gain, and is often resistant to diet and exercise alone.

The Allergan Fat dissolver product consists of a synthetic form of deoxycholic acid, which is a naturally occurring substance in our bodies. When injected into a targeted area, it destroys fat cell membranes, allowing the fat inside to be released and naturally eliminated from the body.

WHAT DOES THE TREATMENT INVOLVE?

Treatment takes approximately 15-30 minutes and is done with a series of injections on a grid to accurately treat the full area of submental fat. The area must be kept clean and dry and recovery is extremely quick, allowing a return to work almost immediately.

ARE THERE ANY SIDE EFFECTS?

Allergan Fat dissolver does come with a few side effects, as most cosmetic injectables do. Luckily, they're mild, and the possibility of developing severe complications is minimal. The most common side effect is swelling, which can last on average 3 days after your treatment. You may also experience some bruising, itchiness, redness, and general discomfort. Some patients also experience numbness or tenderness in the targeted area, in some cases for up to 2 months.

HOW MANY TREATMENTS WILL I NEED AND WHEN WILL I SEE RESULTS?

The amount of treatments required will vary depending on the individual patient. In some cases, up to 6 treatments may be required, however visible results can be seen in 2-4 treatments. If multiple treatments are required these will need to be spaced 4 weeks apart.

Effects from the Allergan Fat dissolver treatment should begin to be noticeable within several weeks, after which your chin, neck and jawline should appear smoother, firmer, and more contoured. Results will develop gradually for the most natural-looking outcome possible.

IS ALLERGAN FAT DISSOLVER COVERED BY MEDICARE OR PRIVATE HEALTH FUNDS?

No, it is a cosmetic procedure and unfortunately most cosmetic procedures are not covered.
