## COOLSCULPTING® TREATMENT CONSENT FORM

The CoolSculpting® procedure uses a non-invasive vacuum applicator to draw in tissue and deliver controlled cooling at the surface of the skin. The procedure is for spot reduction of fat. It is not a weight loss solution and it does not replace traditional methods such as liposuction. Someone who is overweight can expect to see less visible improvement than someone who has smaller fat deposits. Clinical studies have shown CoolSculpting® will naturally remove fat cells, but, as with most procedures, visible results will vary from person to person.

### WHAT YOU CAN EXPECT:

- The suction pressure may cause sensations of deep pulling, tugging and pinching. You may experience intense stinging, tingling, aching or cramping as the treatment begins. These sensations generally subside as the area becomes numb.

Initial \_\_\_\_\_

- The treated area may look or feel stiff after the procedure and transient blanching (temporary whitening of the skin) may occur. You may feel a sense of nausea or dizziness as your body naturally warms and sensation returns to your treatment area. These are all normal reactions that typically resolve within minutes.

Initial \_\_\_\_\_

- Bruising, swelling and tenderness can occur in the treated area and it may appear red for a few hours after the applicator is removed.

Initial \_\_\_\_\_

- You may feel a dulling of sensation in the treated area that can last for several weeks after your procedure. Other changes - including deep itching, tingling, numbness, tenderness to the touch, pain in the treated area, strong cramping, muscle spasms, aching and/or soreness - have also been reported after a CoolSculpting® treatment.

Initial \_\_\_\_\_

- Patient experiences will differ. Some patients may experience a delayed onset of the previously mentioned occurrences. Contact us immediately if any unusual side effects occur or if symptoms worsen over time.

Initial \_\_\_\_\_

- You may start to see changes as early as three weeks after CoolSculpting®, and you will experience the most dramatic results after 1-3 months. Your body will continue to process the injured fat cells from your body naturally for approximately four months after your procedure.

Initial \_\_\_\_\_

- You may decide that additional treatments are needed to reach your desired outcome. You may also need skin tightening.

Initial \_\_\_\_\_

- In rare cases, patients have reported hardness, discrete nodules or enlargement of the treatment area. I understand that these and other unknown side effects may also occur.
