

Pixel Fractional Skin Resurfacing

We all age, yet none of us want our skin to show the signs of ageing. For centuries, people have sought ways of safely and effectively restoring smooth, glowing skin. Now it is possible

Pixel skin resurfacing improves skin texture and tone, smoothes wrinkles, and diminishes brown spots. In short, this procedure erases those fractures that add years to our appearance, restoring youthful vitality.

Best of all, pixel skin resurfacing does all this with no pain and no downtime, providing the effective, dramatic results of ablative resurfacing treatments without its prolonged healing period. This procedure combines the best of both worlds. Pixel skin resurfacing restores skin to its fresh, healthy state, generally allowing patients to resume their normal routine almost immediately.

How does it work?

Pixel skin resurfacing is based on the principle of micro thermal treatment zones. The laser pulses create tiny ablative zones, removing the epidermis and upper dermis. The treatment then triggers the body's natural healing process, stimulating the growth of new, healthy skin tissue.

The procedure treats small zones of skin, leaving surrounding tissue untouched and intact. These large unaffected areas act as a reservoir for more effective and rapid tissue healing and collagen production. The bottom line: new, healthier, smoother tissue in place of skin imperfections.

What to expect?

Your physician will determine the ideal treatment plan for your needs. Generally, treatment involves two to four sessions, at four-week intervals. Right after treatment you may feel a light tingling sensation. You may experience slight swelling for a day or two. As new skin replaces dead tissue, your skin will flake, a sign that healing is underway. Your skin will look better immediately, and will steadily improve over the next few months.

Does it hurt?

Far more comfortable than conventional laser skin resurfacing, Pixel skin resurfacing is experienced by most patients as a comfortable sensation.

Who can be treated and what parts of the body?

Pixel skin resurfacing can be used on patients of most skin types anywhere on the body. Since the procedure spares healthy tissue, it can be performed on delicate skin areas, such as the face, neck, chest and hands.

The advantages of pixel resurfacing

Laser skin resurfacing (LSR) like chemical peels, dermabrasion and micro dermabrasion is commonly used to restore the youthful appearance to wrinkled, sun damaged skin. While yielding excellent results, LSR often involves discomfort and significant downtime. That means an extended period indoors, with no sun exposure which is an impossibility for many active and working patients.

Compared to other methods, Pixel skin resurfacing saves patients time and discomfort. In short, pixel skin resurfacing offers the best of both worlds, superior results, yet no pain and no downtime.

Rewards of Skin Rejuvenation

- Improves skin texture and firmness
- Safe and effective treatment for face, neck, chest, arms and hands
- Little or no discomfort
- No downtime
- Long-term
